NEW YORK, NY—The Insulation Contractors Association of New York City, Inc. (ICA), announces that member contractor Premier Insulation Services, Inc. (Premier) has completed insulation work on three different levels of Yankee Stadium in the Bronx. The crew worked 12-hour shifts for 12 days to complete the project, which had a two-week time frame; Premier finished the job one day ahead of schedule.

The project presented Premier with unique challenges, primarily due to the fact that Almar Plumbing (The Plumbing Contractor), brought Premier in two weeks before Turner had to turn over the Stadium to the Yankee Organization to meet their deadline. Premier insulated the horizontal storm piping in the loading dock, which was 30 feet in elevation. Work was also completed on 16 filtration tanks and the cold meter stations in the mechanical rooms. Most interesting of the work was a 10,000-gallon suction water storage tank, which is filled with city water and distributed to the pumps throughout the building. Some other work that was completed by Premier were the irrigation water lines, 8-inch by 16-inch domestic water pipes, fittings, and valves.

Premier also worked on other various locations throughout the entire Stadium that came up as punch list items.

"As a huge Yankee fan, it was a blessing to be part of the completion of Yankee Stadium, and thank Almar Plumbing for making us part of this project," said Christos Koukounas, CEO of Premier. "My guys work hard and take pride in their work, this was that much more special to them."

Premier Insulation Services, established in 2006 by Koukounas, is a Mechanical Insulation contractor located in Maspeth, NY. Premier has extensive insulating experience in both the commercial and industrial sectors. Besides working on new construction and retrofit projects, the firm also works with building managers, plant managers and chief engineers for all their Mechanical Insulation service and maintenance needs. They offer all types mechanical insulation products and services for pumps, chiller plants, steam stations, Heat exchangers, weather proofing for

outdoor pipe and ductwork, two-hour rated fire wrap and sound proofing.
